Experiment No.3
Apply Stop Word Removal on given English and Indian
Language Text
Date of Performance:
Date of Submission:

Department of Artificial Intelligence & Data Science

Aim: Apply Stop Word Removal on given English and Indian Language Text.

Objective: To write program for Stop word removal from a sentence given in English and any

Indian Language.

Theory:

The process of converting data to something a computer can understand is referred to as pre-

processing. One of the major forms of pre-processing is to filter out useless data. In natural

language processing, useless words (data), are referred to as stop words.

Stopwords are the most common words in any natural language. For the purpose of analyzing

text data and building NLP models, these stopwords might not add much value to the meaning

of the document.

Stop Words: A stop word is a commonly used word (such as "the", "a", "an", "in") that a search

engine has been programmed to ignore, both when indexing entries for searching and when

retrieving them as the result of a search query. We need to perform tokenization before

removing any stopwords.

Why do we need to Remove Stopwords?

Removing stopwords is not a hard and fast rule in NLP. It depends upon the task that we are

working on. For tasks like text classification, where the text is to be classified into different

categories, stopwords are removed or excluded from the given text so that more focus can be

given to those words which define the meaning of the text.

Here are a few key benefits of removing stopwords:

On removing stopwords, dataset size decreases and the time to train the model also

decreases

Removing stopwords can potentially help improve the performance as there are fewer

and only meaningful tokens left. Thus, it could increase classification accuracy

CSDL7013: Natural Language Processing Lab

Vidyavardhini's College of Engineering and Technology Department of Artificial Intelligence & Data Science

• Even search engines like Google remove stopwords for fast and relevant retrieval of data from the database

We can remove stopwords while performing the following tasks:

- Text Classification
 - Spam Filtering
 - o Language Classification
 - o Genre Classification
- Caption Generation
- Auto-Tag Generation

Avoid Stopword Removal

- Machine Translation
- Language Modeling
- Text Summarization
- Question-Answering problems

Different Methods to Remove Stopwords

1. Stopword Removal using NLTK

NLTK, or the Natural Language Toolkit, is a treasure trove of a library for text preprocessing. It's one of my favorite Python libraries. NLTK has a list of stopwords stored in 16 different languages.

You can use the below code to see the list of stopwords in NLTK:

import nltk
from nltk.corpus import stopwords
set(stopwords.words('english'))

Vidyavardhini's College of Engineering and Technology Department of Artificial Intelligence & Data Science

2. Stopword Removal using spaCy:

spaCy is one of the most versatile and widely used libraries in NLP. We can quickly and efficiently remove stopwords from the given text using SpaCy.

It has a list of its own stopwords that can be imported as **STOP_WORDS** from the **spacy.lang.en.stop words** class.

3. Stopword Removal using Gensim

Gensim is a pretty handy library to work with on NLP tasks. While pre-processing, gensim provides methods to remove stopwords as well. We can easily import the remove stopwords method from the class gensim.parsing.preprocessing.

▼ Library required

```
!pip install nltk
```

```
Requirement already satisfied: nltk in c:\users\admin\appdata\local\programs\python\python37\lib\site-packages (3.6.2)
Requirement already satisfied: joblib in c:\users\admin\appdata\local\programs\python\python37\lib\site-packages (from nltk) (1.0.0
Requirement already satisfied: click in c:\users\admin\appdata\local\programs\python\python37\lib\site-packages (from nltk) (7.1.2)
Requirement already satisfied: regex in c:\users\admin\appdata\local\programs\python\python37\lib\site-packages (from nltk) (2021.4
Requirement already satisfied: tqdm in c:\users\admin\appdata\local\programs\python\python37\lib\site-packages (from nltk) (4.60.0)
WARNING: You are using pip version 22.0; however, version 23.2.1 is available.
You should consider upgrading via the 'c:\users\admin\appdata\local\programs\python\python37\python.exe -m pip install --upgrade pip
```

▼ Text

text = 'TON 618 is a hyperluminous, broad-absorption-line, radio-loud quasar and Lyman-alpha blob located near the border of the constell

+ Code + Text

text

'TON 618 is a hyperluminous, broad-absorption-line, radio-loud quasar and Lyman-alpha blob located near the border of the constellations Canes Venatici and Coma Berenices, with the projected comoving distance of approximately 18.2 billion light-years from Earth.'

Stopwords

```
from nltk.corpus import stopwords
stop_words = stopwords.words('english')
from nltk.tokenize import word_tokenize
words = word_tokenize(text)
```

Applying stop words

```
holder = list()
for w in words:
   if w not in set(stop_words):
        holder.append(w)
holder
     ['TON',
       '618'
      'hyperluminous',
      'broad-absorption-line',
      'radio-loud',
       'quasar',
       'Lyman-alpha',
      'blob',
       'located',
      'near',
'border'
      'constellations',
      'Canes',
      'Venatici',
      'Coma',
      'Berenices',
      ٠,٠,
       'projected',
       'comoving',
       'distance'
      'approximately',
       '18.2',
      'billion'
      'light-years',
      'Earth',
      '.']
```

▼ List Comprehension for stop words

▼ Stemming

```
from nltk.stem import PorterStemmer, SnowballStemmer, LancasterStemmer

porter = PorterStemmer()
snow = SnowballStemmer(language = 'english')
lancaster = LancasterStemmer()

words = ['play', 'plays', 'played', 'playing', 'player']

Porter Stemmer

porter_stemmed = list()
```

```
porter_stemmed = list()
for w in words:
    stemmed_words = porter.stem(w)
    porter_stemmed.append(stemmed_words)

porter_stemmed
    ['play', 'play', 'play', 'player']
```

▼ Porter Stemmer List Comprehension

```
porter_stemmed = [porter.stem(x) for x in words]
print (porter_stemmed)
    ['play', 'play', 'play', 'play', 'player']
```

▼ Snowball Stemmer

```
snow_stemmed = list()
for w in words:
    stemmed_words = snow.stem(w)
    snow_stemmed.append(stemmed_words)

snow_stemmed
    ['play', 'play', 'play', 'play', 'player']
```

▼ Snowball Stemmer List Comprehension

```
snow_stemmed = [snow.stem(x) for x in words]
print (snow_stemmed)
    ['play', 'play', 'play', 'player']
```

▼ Lancaster Stemmer

```
lancaster_stemmed = list()
for w in words:
    stemmed_words = lancaster.stem(w)
    lancaster_stemmed.append(stemmed_words)

lancaster_stemmed
    ['play', 'play', 'play', 'play', 'play']
```

▼ Lancaster Stemmer List Comprehension

```
lancaster_stemmed = [lancaster.stem(x) for x in words]
print (lancaster_stemmed)
    ['play', 'play', 'play', 'play']
```

▼ Lemmatization: This has a more expansive vocabulary than Stemming

```
from nltk.stem import WordNetLemmatizer
wordnet = WordNetLemmatizer()

lemmatized = [wordnet.lemmatize(x) for x in words]

lemmatized
    ['play', 'play', 'played', 'playing', 'player']
```

Conclusion:

Stop word removal is a crucial text preprocessing step in natural language processing (NLP) that involves removing common, low-information words (stop words) from a text corpus. The specific set of stop words can vary between languages, and it's essential to understand how this process works for both English and Indian languages.
